

Zprovoznění na straně Facebook for Developers

Vytvoření aplikace a produktu

Pro zprovoznění feedu na Vašem e-shopu si nejprve musíte vytvořit aplikaci v účtu Facebook for Developers <https://developers.facebook.com/>.

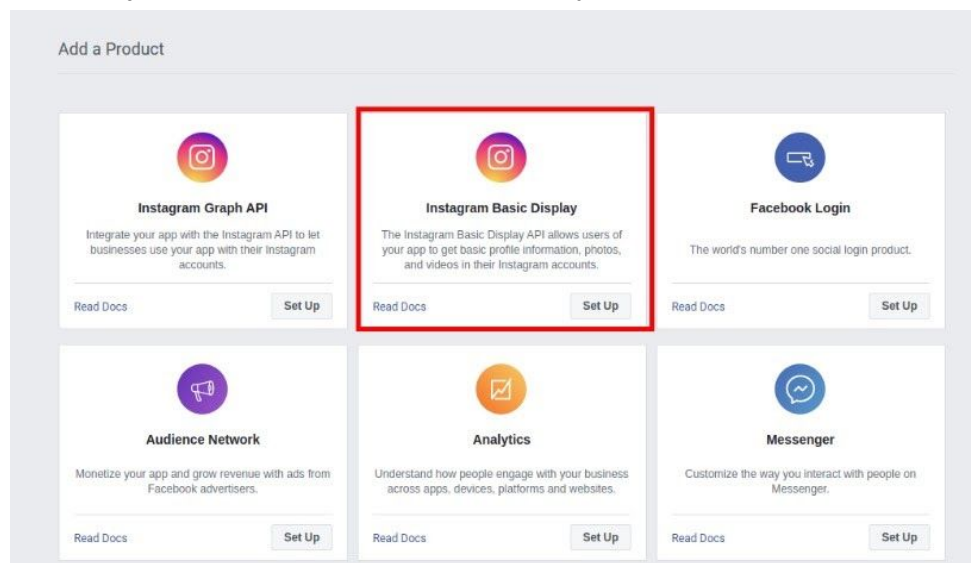

Create an App ID [Close]

How are you using your app? [Learn More](#)

- Manage Business Integrations**
Create or manage Pages, Groups, Events, Ads, Messenger, Instagram or other types of business integrations.
- Integrate a Third-Party Gaming App**
Create an app to let people play mobile games that are off the Facebook platform. **Note:** Select **For Everything Else** option to build Instant Games or Canvas Games.
- For Everything Else**
Select if you're integrating Facebook Login, building an Instant Game or app that will access user data on Facebook or Instagram.

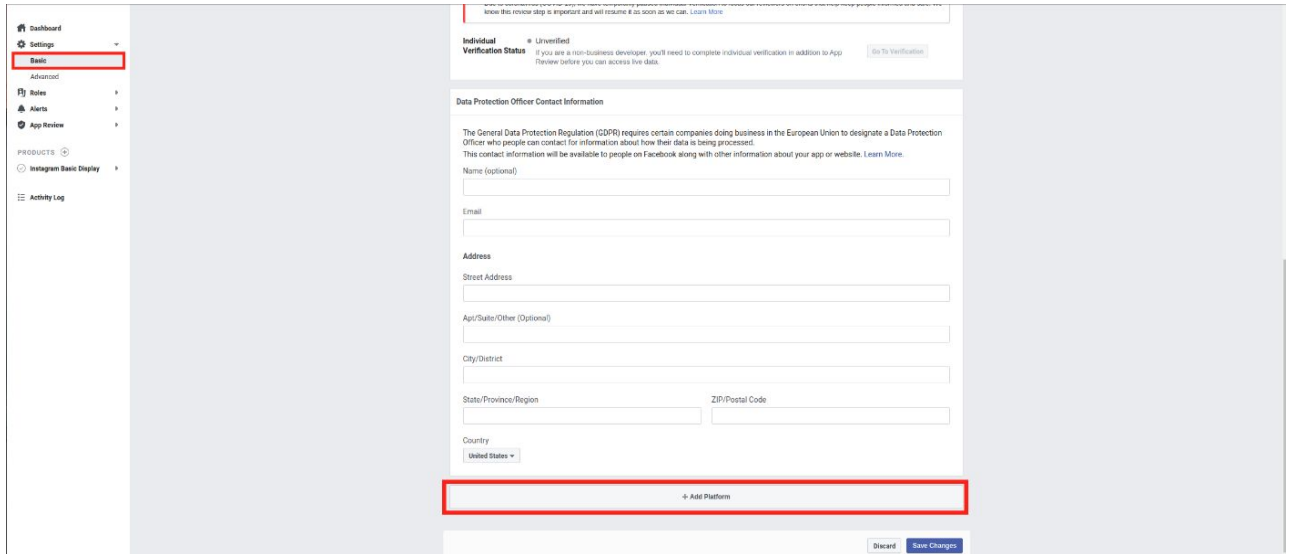

Po vytvoření přidejte produkt Instagram Basic Display.

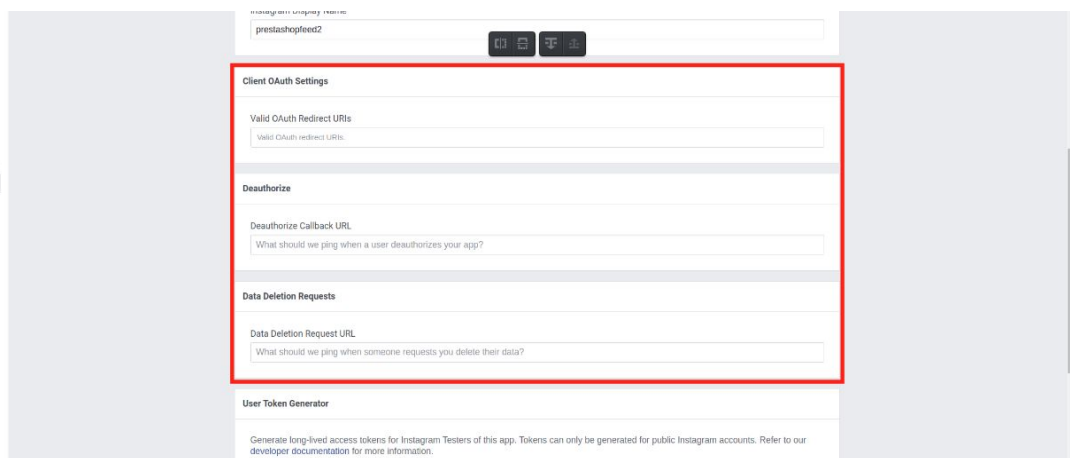

Add a Product

- Instagram Graph API**
Integrate your app with the Instagram API to let businesses use your app with their Instagram accounts.
[Read Docs] [Set Up]
- Instagram Basic Display**
The Instagram Basic Display API allows users of your app to get basic profile information, photos, and videos in their Instagram accounts.
[Read Docs] [Set Up]
- Facebook Login**
The world's number one social login product.
[Read Docs] [Set Up]
- Audience Network**
Monetize your app and grow revenue with ads from Facebook advertisers.
[Read Docs] [Set Up]
- Analytics**
Understand how people engage with your business across apps, devices, platforms and websites.
[Read Docs] [Set Up]
- Messenger**
Customize the way you interact with people on Messenger.
[Read Docs] [Set Up]

Dále je potřeba nastavit platformu v nastavení samotné aplikace. Jako platformu vyberte možnost webová stránka a do textového pole napište doménu Vašeho e-shopu včetně protokolu.

V nastavení produktu Instagram Basic Display musíte přidat povolené URL adresy pro jednotlivé možnosti. Podstatné je především první pole, kde musíte zadat URL ve tvaru: <https://vasedomena.cz/modules/jpigpreview/redirect.php/>, pro zbývající dvě možnosti zadejte pouze Vaši doménu.

Přidání testera

Pro správné fungování feedu není potřeba aby aplikace běžela v live módu, ale musíte přidat účet, ze kterého budete načítat fotky, jako testera aplikace.

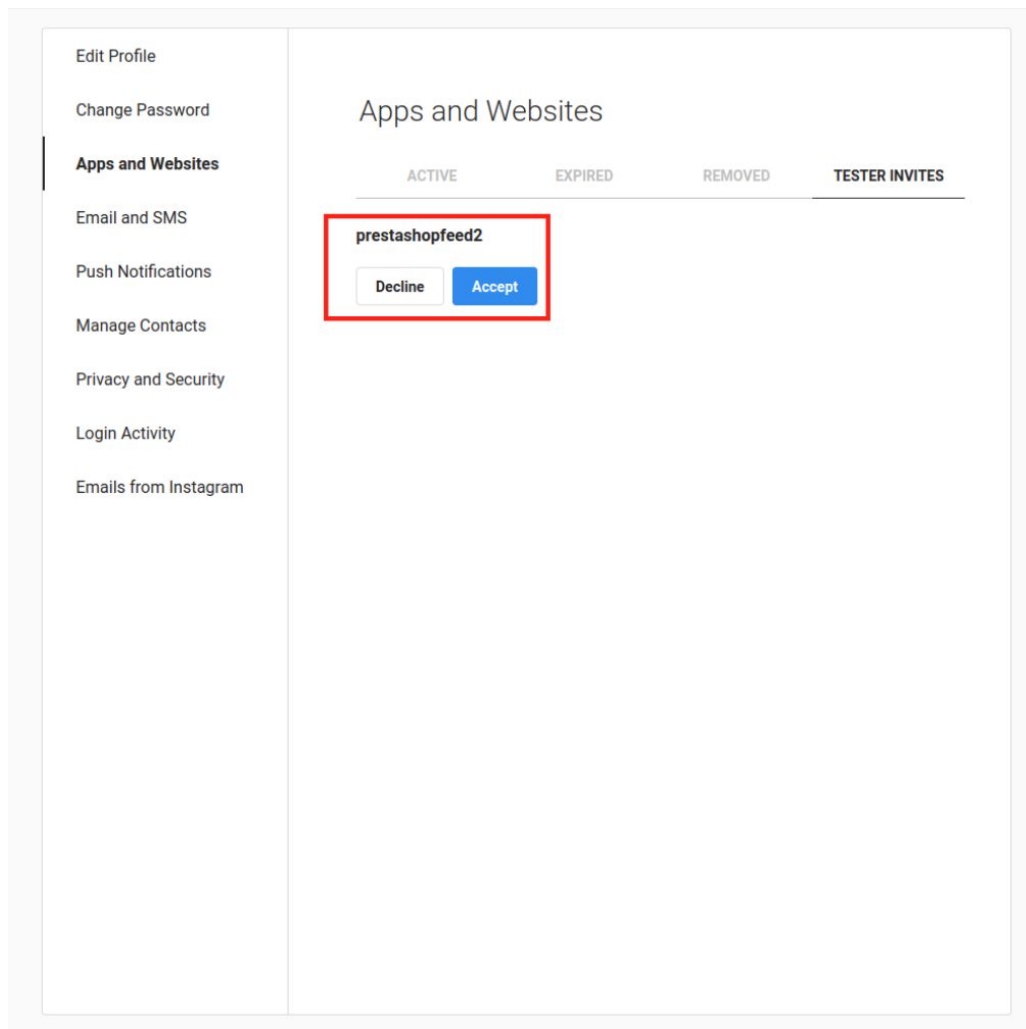

The screenshot shows the Facebook App Review interface. On the left is a navigation sidebar with the following items: Dashboard, Settings, Roles, Alerts, App Review, PRODUCTS (expanded), Instagram Basic Display, Basic Display (highlighted with a red box), Basic Display Rate Limiting, and Activity Log. The main content area is divided into several sections:

- What should we ping when someone requests you delete their data?** (input field)
- User Token Generator**: A section for generating long-lived access tokens. It includes a table with columns for 'Instagram Test Users' and 'Tokens'. A red box highlights the **Add or Remove Instagram Testers** button.
- App Review for Instagram Basic Display**: A section for approving permissions. It lists two permissions: **instagram_graph_user_profile** and **instagram_graph_user_media**, each with an **Add to Submission** button.

The second screenshot shows the 'Roles' section of the App Review interface. The sidebar is identical to the first screenshot. The main content area shows the following sections:

- Test Users**: A section for adding test users.
- Developers**: A section for adding developers. It shows 'There are no developers for this app.' and an **Add Developers** button.
- Testers**: A section for adding testers. It shows 'There are no testers for this app.' and an **Add Testers** button.
- Analytics Users**: A section for adding analytics users. It shows 'There are no Analytics users for this app.' and an **Add Analytics Users** button.
- Instagram Testers**: A section for adding Instagram testers. It shows 'There are no Instagram Testers for this app.' and a red box highlights the **Add Instagram Testers** button.

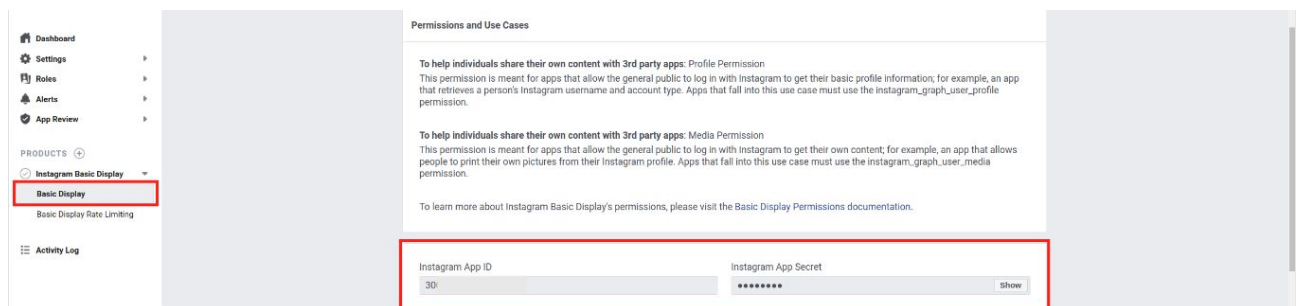

Poté musíte přejít do Vašeho Instagramového účtu a potvrdit roli testera.

Varianta A: vygenerování tokenu z administrace Prestashopu

Pro zprovoznění feedu, touto možností je potřeba používat na e-shopu protokol HTTPS.

V administraci aplikace Facebook Developers klikněte na záložku Basic Display, pod Instagram Basic Display a následující údaje nakopírujte do příslušných polí v konfiguraci modulu.

Varianta B: vygenerování tokenu z administrace Facebook Developers

Pro každého přidaného testera můžete vygenerovat token, který poté můžete vložit do příslušného pole v konfiguraci modulu.

The screenshot displays the Facebook Developers Admin interface. On the left is a navigation sidebar with the following items: Dashboard, Settings, Roles, Alerts, App Review, PRODUCTS (with a plus icon), Instagram Basic Display (with a minus icon), Basic Display Rate Limiting, and Activity Log. The main content area is divided into three sections: 'Deauthorize Callback URL' with a text input field and a placeholder 'What should we ping when a user deauthorizes your app?'; 'Data Deletion Requests' with a text input field and a placeholder 'What should we ping when someone requests you delete their data?'; and 'User Token Generator'. The 'User Token Generator' section contains a heading, a paragraph of instructions, and a table with two columns: 'Instagram Test Users' and 'Tokens'. The table is currently empty. To the right of the table are two 'Generate Token' buttons, the top one of which is highlighted with a red box. Below the table is a blue button labeled 'Add or Remove Instagram Testers'.

Zobrazení feedu jinde než na stránce domů

Kromě zobrazení feedu na homepage Vašeho e-shopu, tento modul umožňuje zobrazení feedu i na libovolné jiné pozici. Modul registruje hook `displayInstagramPosts`. Pro zobrazení feedu tak stačí pouze vložit `{hook h="displayInstagramPosts"}` na libovolné místo v šabloně.
